

2006 Civic and Political Health Survey Spring 2006

Data Codebook

By Mark Hugo Lopez, Research Director

The 2006 National Civic and Political Health Survey (CPHS) is a detailed look at how young Americans are participating in politics and communities and their attitudes towards government and current issues. This survey asked young people and adults about their civic engagement across 19 core measures of engagement. The survey was conducted from April 27 to June 11, 2006 by telephone and online survey and released on October 3 in a report entitled [The 2006 Civic and Political Health of the Nation: A Detailed Look at How Youth Participate in Politics and Communities](#). The survey provides nationally representative samples of young people and adults. Overall, 1,674 young people ages 15 to 25 were surveyed along with 547 adults ages 26 and older. The survey includes over-samples of young Latinos, African-Americans, and Asian-Americans. The questionnaire for this survey largely replicates one designed by Scott Keeter, Cliff Zukin, Molly Andolina, and Krista Jenkins fielded in 2002.¹

Methodology

The 2006 CPHS, sponsored by CIRCLE, obtained telephone and web interviews of a nationally representative sample of 2,232 people aged 15 and older living in the continental United States. The survey contacted young people ages 15 to 25 (n=1,674) and adults 26 and older (n=547).² Interviewing includes over-samples of young African-Americans (n=296), Latinos (n=420) and Asian-Americans (n=184) ages 15 to 25. The survey was conducted by Princeton Survey Research International. Data collection was done via telephone and web by Braun Research, Inc. from April 27 to June 11, 2006. Statistical results are weighted to correct known demographic discrepancies. The margin of sampling error for the complete set of weighted data is ± 3.5 percentage points. The margin of error for the telephone sample (n=1,765) is ± 3.6 percentage points, and the margin of error for the youth sample of the survey ± 2.6 percentage points.

Sample Design

The sample was designed to represent all people ages 15 and older in the continental United States and includes over-samples of young African-Americans, Latinos and Asian-Americans. Two samples were used to collect the data – a telephone sample and a web sample.

The telephone sample was provided by Survey Sampling International, LLC (SSI) according to PSRAI specifications. The sample was drawn using standard *list-assisted*

random digit dialing (RDD) methodology. *Active blocks* of telephone numbers (area code + exchange + two-digit block number) that contained three or more residential directory listings were selected with probabilities in proportion to their share of listed telephone households; after selection two more digits were added randomly to complete the number. This method guarantees coverage of every assigned phone number regardless of whether that number is directory listed, purposely unlisted, or too new to be listed. After selection, the numbers were compared against business directories and matching numbers purged.

To supplement the RDD interviews an additional 467 interviews were completed online with African-Americans, Latinos and Asian-Americans aged 15 to 25. Sampling was provided by Survey Sampling International (SSI). The SSI SurveySpot panel, a premium source of sample for online surveys, was used to recruit respondents. The SurveySpot panel recruits panelists from many sources; including banner ads, online recruitment methods, and RDD telephone recruitment. Unsolicited email or “spam” is not used. The panel is continually growing and currently covers about 4.5 million household members and 1.5 million panelists. Panelists are continuously monitored to prevent under-surveying and over-surveying in an effort to maintain their interest in participating. Panelists are offered rewards with each survey invitation, increasing their likelihood of participation.

Contact Procedures

Interviews were conducted from April 27 to June 11, 2006. As many as seven attempts were made to complete an interview at every sampled telephone number. Sample was released for interviewing in replicates, which are representative subsamples of the larger sample. Using replicates to control the release of the sample ensures that complete call procedures are followed for the entire sample.

Calls were staggered over times of day and days of the week to maximize the chance of making contact with potential respondents. Each household received at least one daytime call in an attempt to find someone at home. In each contacted household, interviewers asked to speak with a randomly selected eligible household member.

The telephone interviewing over-sampled 15-to-25-year-olds by setting a maximum quota for respondents 26 and older. After that quota was filled, all remaining interviews were conducted with 15-to-25-year-olds. Households with no residents ages 15 to 26 were deemed ineligible and screened-out. Interviews were conducted with 15 year olds only after getting parental consent.

Using these Data

The 2006 CPHS is available in four data formats: STATA version 9.0, SPSS Windows format, SPSS portable file format, and SAS transport file format.

Any analysis of these data require the use of a weighting variable called “weight”. All analyses of the data require the use of this weighting variable.

The data set includes 194 variables.

The report associated with this dataset produces a typology of civic engagement. The typology and the variables used to create it are contained in the dataset and are explained in greater detail in the report, *The Civic and Political Health of the Nation: A Generational Portrait*.
